

Section 29.1--29.3--Study Guide

Find the volume of each figure. Round your answers to the nearest hundredth, if necessary.

$$\frac{\pi \cdot r^2 \cdot h}{3}$$

$$\frac{\pi \cdot 9^2 \cdot 18}{3}$$

1526.81 cm³

$$\frac{L \cdot w \cdot h}{3}$$

$$\frac{7 \cdot 7 \cdot 9}{3}$$

147 in³

$$a \cdot b \cdot h$$

$$6.9 \cdot 8 \cdot 12$$

662.4 km³

$$\frac{L \cdot w \cdot h}{6}$$

$$\frac{3 \cdot 5 \cdot 4}{6}$$

10 m³

$$\pi \cdot r^2 \cdot h$$

$$\pi \cdot 7^2 \cdot 11$$

1693.32 mi³

$$\frac{5 \cdot a \cdot b \cdot h}{2}$$

$$\frac{5 \cdot 6 \cdot 2 \cdot 4 \cdot 9}{2}$$

558 yd³

Find the area of each figure. Round your answer to the nearest tenth.

7) A regular hexagon with a perimeter of 36 in.
93.5 in²

$$A = \frac{1}{2} a P$$

Use 30-60-90

$$X = 3\sqrt{3}$$

$$A = \frac{1}{2} (3\sqrt{3})(36)$$

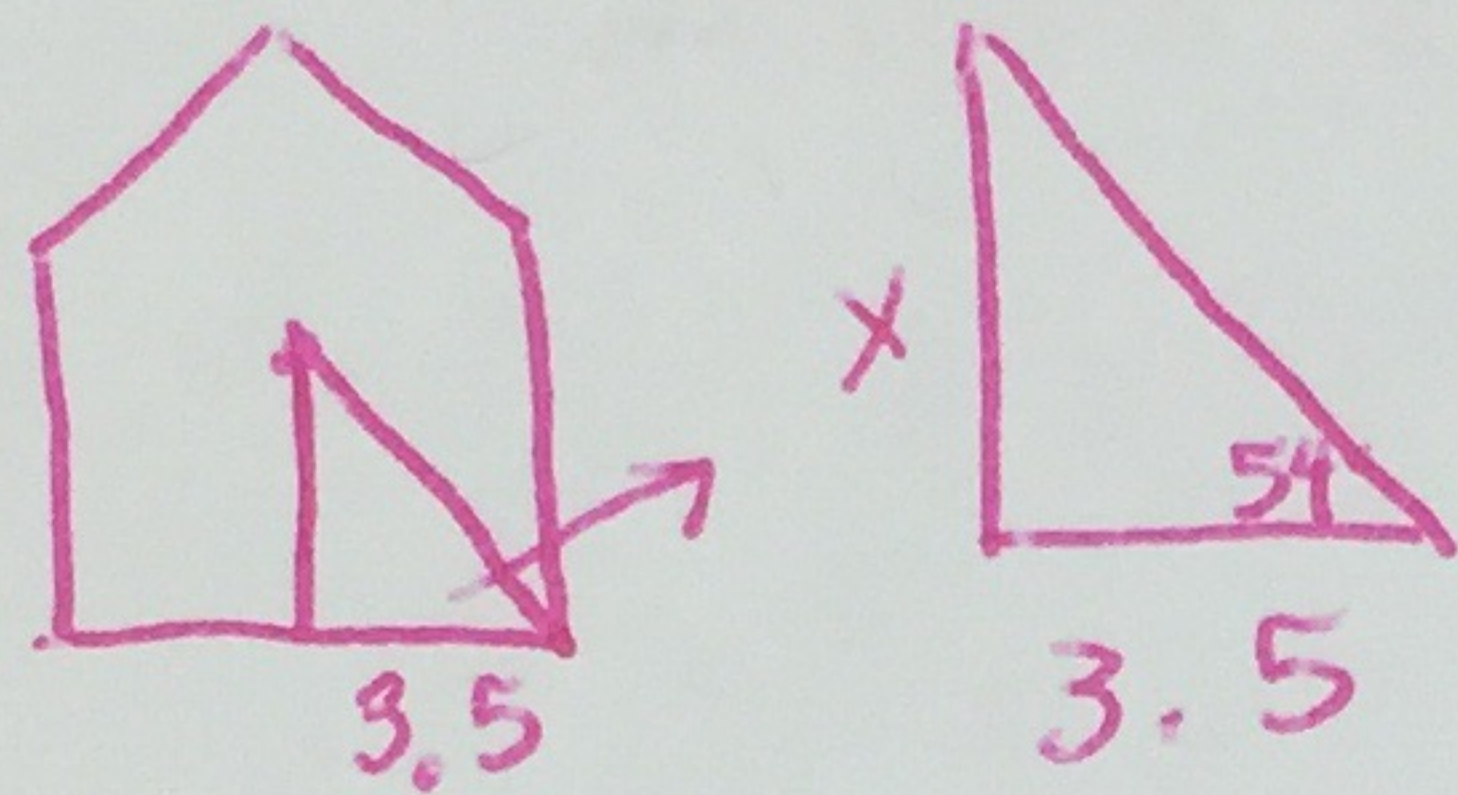

$$A = 93.5$$

Perimeter = 36 in
Each side = 6 in
Take 1/2 of 6

8) A regular pentagon measuring 7 ft on each side.

84.3 ft²

Angle
 $\frac{180(3)}{5} = 108$
divide in half!

$$\tan(54) = \frac{X}{3.5}$$

$X = 4.817336722$ (use "ans" button for more accurate calculations)

$$A = \frac{1}{2} (\uparrow) (35)$$

$$A = 84.3$$

$$\frac{180(8)}{10}$$

$$\tan(72) = \frac{X}{2}$$

$$X = 6.155367074$$

$$A = \frac{1}{2} (\uparrow) (40)$$

$$A = 123.1$$

10) A rectangular prism has a volume of 24 inches³. If the area of the base is 12 inches², what is the height of the prism?

$$V = \underbrace{L \cdot W}_{\text{area of base}} \cdot h$$

$$24 = 12 \cdot h$$

$$2 = h$$

- 11) Find the volume of a cone that has a slant height of 100 ft and a radius 28 ft. Give your answer in both terms of π and rounded to the nearest tenth.

$$\text{Cone} = \frac{\pi \cdot r^2 \cdot h}{3}$$

$$\frac{\pi \cdot 28^2 \cdot 96}{3}$$

$$25088\pi \text{ or } 78816.3$$

- 12) Find the radius of a cylinder that has a volume of $200\pi \text{ cm}^3$ and a height of 8cm.

$$\text{Cylinder} = \pi \cdot r^2 \cdot h$$

$$200\pi = \pi \cdot r^2 \cdot 8$$

$$25 = r^2$$

$$5 = r$$

- 13) Find the height in centimeters of a square pyramid with a volume of 243 cm^3 and a base edge length equal to the height.

square means Length & width are same
 • this says height is the same as length
 so all 3 dimensions must be the same

$$\frac{L \cdot w \cdot h}{3} \rightarrow \frac{L \cdot L \cdot L = 243}{3 \cdot 3} \rightarrow L^3 = 729$$

$$L = \sqrt[3]{729}$$

$$L = 9 \text{ so } h = 9$$

- 14) The radius and height of a cylinder are multiplied by $\frac{2}{3}$. Describe the effect on the volume.

$$\text{Cylinder} = \pi \cdot r^2 \cdot h$$

Original (I made this up)

$$\pi \cdot 6^2 \cdot 9 = 324\pi$$

New ($\times \frac{2}{3}$)

$$\pi \cdot 4^2 \cdot 6 = 96\pi$$

The effect is that it shrinks by $\frac{8}{27}$.

Why? $\left(\frac{2}{3}\right)^3$ ← cube b/c volume is cubed

$$\frac{2^3 = 8}{3^3 = 27}$$
